

After a discussion we came to the next agreement:

General agreement

- **education:** Education is important because it determines the future of our youth and ultimately the success of our country.
We want to improve education by making it more accessible and better prepare the youth for adult life.
We want to do this by subsidizing schools that are committed to accessibility, progression and development of students.
- **economy:** we want more economic growth and less inflation to stimulate the economy
- **work:** We are striving for better equality and better working conditions, but also better paid jobs and less taxes so that people have more money left over at the end of the month. This will also mean that fewer people will be unemployed because we want to make sure that everyone can get a job. We can achieve this by encouraging people and giving them better training so that a suitable person can be found for every job.
- **equality:** We will make sure that everyone will be treated with respect, regardless of who they are. We want everyone to get the same opportunities.
- **public health:** Covid showed us we need to invest in the wages of nurses and doctors in order to make sure that there will be more doctors in the future. support students who are studying to be nurses.
